

JSXM installation instructions (from the authors of the tool):

Save the attached "settings.xml" file inside the .m2 folder. The .m2 folder is located:

- Linux: ~/home/username/.m2
- Windows: C:\users\username\.m2
- Mac: /Users/username/.m2

Everything should work according to the documentation with this change. The change has been tested in Linux and Windows 10.

Some tips:

- Important in any case is using **maven version 3.0.5** as pointed out in the documentation.
- The command to create a new project in Windows is (I am not using Windows):
  - `mvn archetype:generate --batch-mode -DarchetypeVersion="1.4" -DgroupId="org.jsoup.Counter" -DartifactId="Counter" -DarchetypeGroupId="org.jsoup.archetypes" -DarchetypeArtifactId="jsxm-quickstart-archetype"`
